

MOREY INNOVATION CENTER COMPLETE

Meridian Design Build has completed the construction for a new 26,300-sq.-ft. two-story Innovation Center at Morey Corp.'s Global Headquarters in Woodridge. Located in Internationale Centre, this new facility increases Morey's total square footage in the park to 121,500 sq. ft.

The new building will serve as a technical development, engineering and testing facility for all products developed by The Morey Corp. The facility features large volume spaces designed to accommodate laboratory and testing facilities, prototype display areas and a center for engineering design. The building also features a connecting link to Morey's existing manufacturing office/facility and a partial basement with an underground

parking garage.

The project was completed on a design-build basis with the assistance of project architect, Oak Park-based Schmidt Design and civil engineer, Vernon Hills-based Manhard Consulting Ltd. Peter Stadler, vice president, and Jim Cather, superintendent headed up the project for Meridian Design Build.
